SELECTS AN INTELLIGENT LOCKER SYSTEM

Vienna University of Economics & Business (WU) is the largest university focusing on business & economics in Europe and is ranked as one of the best business schools in Europe.

Roughly 2,100 employees strive continuously to further the education of over 22,000 students from 110 countries.

System requirements

In the course of constructing significant university extensions, the WU sought a modern, easy to manage locker system that would reduce the hassle of administration and provide increased control of the newly, installed 3,800 student and employee lockers.

The Solution

To simplify the management of the newly installed lockers, the WU opted for GANTNER's networked locking system for lockers. Lockers may be securely operated with pre-existing Student Id cards that contain an embedded NFC chip that communicates via contactless technology to GANTNER's system. Of the 3,800 lockers, approximately 90% operate in free-locker mode, meaning users can select any available locker. If desired, students may also opt for a personal, dedicated locker.

Once locked, the locker number and Unique Identification Number of the university card are linked and stored in a localized database, ensuring that only the card with the assigned locker number can open the corresponding locker.

Thanks to acoustic feedback and color LED lights, which display green for available lockers and red for lockers in-use, the locker system is easy and intuitive to use.

FEATURES

- Easy Assignment of Locker (Student/Employee Id Cards)

- Eliminated maintenance costs associated with combination locks

- Reduced staff time spent managing and administrating lockers

- Positive User Experience

- Increased Security with a Networked Alarm

- JSON Interface/Data synchronisation with Campus Software

Convenient locker access with a Student Id Card.

With no pins to remember, no additional keys to carry or replace, the system is both convenient-to-use and easy-to-manage.
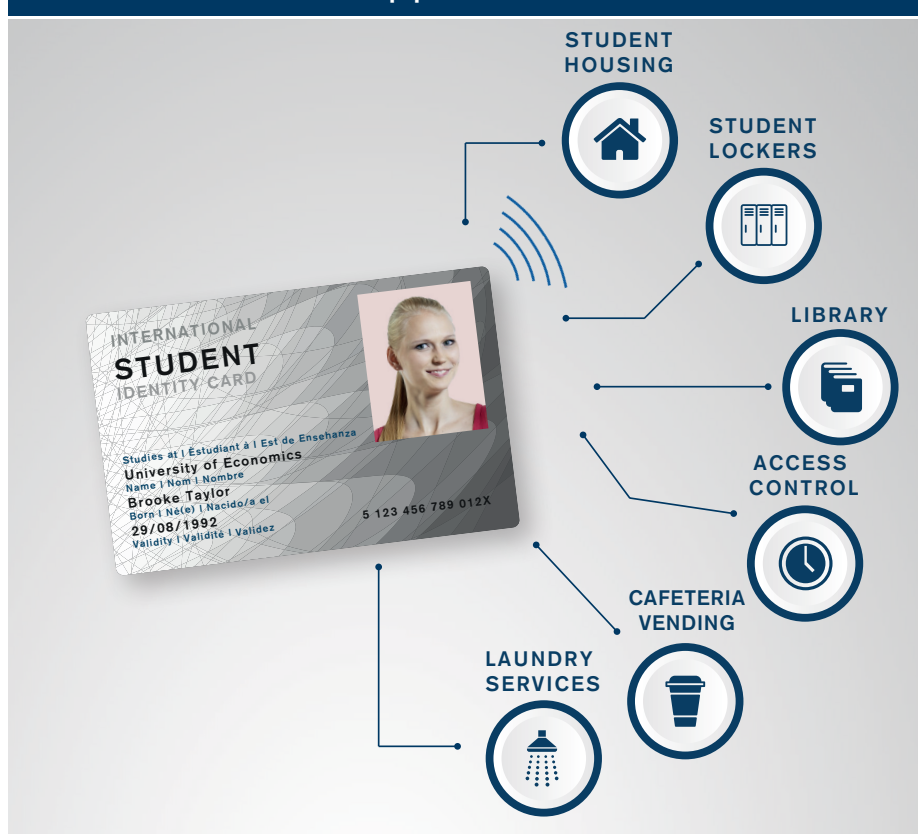

University security is of great importance and the GANTNER locking system guarantees the safety of belongings thanks to a customizable, networked alarm delivered to maintenance and security staff. Additional features include an automatic opeing function for cleaning or security purposes, real-time occupancy monitoring, the ability to reserve lockers for visitors and more.

" We believe that the operational improvements afforded by GANTNER results in reduced maintenance costs, increased security, and ultimately greater satisfaction amongst WU students and staff. "
