

Information Security Policy

Our information assets are essential for fulfilling our responsibilities and tasks as GANTNER Electronic GmbH. In this context, the definition of information assets includes the data in our company as well as the physical information technology, infrastructure and our employees.

We do not see information security as an obstacle to our business activities but rather as a meaningful support and competitive advantage.

For this reason, we attach great importance to the protection of information (information assets). We have identified and evaluated these assets together and have derived corresponding measures in guidelines. The current guidelines are available to all employees at all times in the IMS (Integrated Management System) and are valid for all employees.

With our information security policy, we want to

- ensure the general information security objectives of confidentiality, integrity and availability and, deriving from this, to
- protect information assets in our company against conscious or unconscious manipulation.
- ensure the rights of our employees with regard to information security and data protection.
- ensure the company's compliance with the legal requirements of information security.
- process our customers' data carefully and in a secure environment in order to gain and maintain our customers' trust.
- minimize risks for our company and our customers.
- ensure continued ability to do business.
- continuously improve our business operations in the context of information security.

We, the management and the employees, undertake to regard the information policy and its objectives as a common aspiration and to align all activities in the company accordingly.
