

# Handling Contactless Chip Cards

The contactless Chip card is nowadays one of the most secure identifications medium in the application area of access control, time recording, customer cards and club cards. The specific advantage is, that this medium is maintenance-free, since there is no contacting or tangency with a reader for identification necessary.

Nevertheless, the following rules must be pointed out for the smooth operation of the system:

- **Do not expose the card too long to insolation**
- **Leave the card on no account in the sun behind a cars' windscreen**
- **Generally do not expose the card at too high temperature**
- **Do not bend the card deliberately or forcibly**
- **Keep the card safe, if possible, in a clear casing**
- **Do not take the card into the sauna without a clear casing**
- **Do not pierce the card at all**
