

COMFORTABLE. FAST. SAFE.

GT7 powered by XS4 Face

GT7 powered by XS4 Face, adds facial recognition as an additional means of identification to the tried and-tested Gantner terminals. XS4 Face recognises the registered member; GT7 verifies their authorisation and grants access or authorises the service – quickly, contactlessly and efficiently.

Key Benefits

- > Automatic facial recognition at the access point – for a quick and hassle-free check-in.
- > Access without a card, wristband or smartphone.
- > Registration via a secure web process on the user's own mobile device – without the need for an additional app.
- > Personalised access makes it difficult to transfer memberships.
- > Liveness detection and anti-spoofing protect against attempts at deception.
- > Privacy by Design: Biometric templates remain stored locally on the system; user and access images are not stored.
- > Retrofittable and scalable: For installations compatible with GT7, GT7 Lite or GC7.3000 – from single sites to fitness centres.

From invitation to access

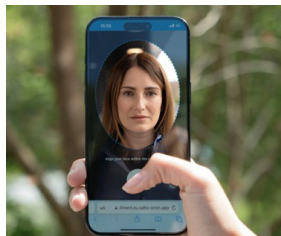

01

Invitation

The club sends an invitation to the management software.

02

Register

Check the privacy policy, give consent and take a selfie – without needing an additional app.

03

Recognition

XS4 Face identifies the registered member directly at the point of entry.

04

Validate

The GT7 checks authorisation and clearly indicates approval or rejection on the terminal.
